A For Apple

An apple is an edible fruit produced by an apple tree (*Malus domestica*). Apple trees are cultivated worldwide and are the most widely grown species in the genus *Malus*.

a new world

Apple trees are large if grown from seed. Generally, apple cultivars are propagated by grafting onto rootstocks, which control the size of the resulting tree. There are more than 7,500 known cultivars of apples, resulting in a range of desired characteristics. Different cultivars are bred for various tastes and use, including cooking, eating raw and cider production.

Z For Zebra

Zebras Are African equines with distinctive black-and-white striped coats. There are three extant species; the Grévy's zebra (*Equus grevyi*), plains zebra (*E. quagga*) and mountain zebra (*E. zebra*).

Their stripes come in different patterns, unique to each individual. Several theories have been proposed for the function of zebra stripes with most evidence supporting them as a form of protection from biting flies and/or having a thermoregulatory role. Zebras share the genus *Equus* with horses and asses and together they are the only living members of the family Equidae. Zebras belong to the subgenus *Hippotigris*
